

Instruction for Fetlock and Heel Protection

1

The sensitive fetlock folds are optimally protected by the fetlock guard. This acts preventively against chafing in this area.

2

The heel protection provides additional protection for horses with delicate and sensitive heel areas. It optimally protects both the heel and the fetlock fold.

3

Open the fastening strap and loosen it so that two loops can be pulled out next to the rear central bar.

4

Take the heel/fetlock guard and hold it so that the Velcro wings can be threaded through the slots in the heel shell. Pull the Velcro wings through the slots and close them at the back.

IMPORTANT NOTES

Do not use hoof grease or similar greasy products such as oils or creams! These reduce the boot's optimal grip!

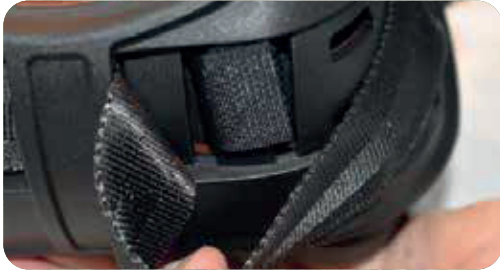

To extend the lifespan of your Swiss Galoppers, regularly clean the fastening and fetlock straps by rinsing with water and always close the Velcro fasteners when not in use.

Instruction for Fetlock and Heel Protection

5

The closed Velcro wings should fit snugly against the heel part. Once both sides are threaded and closed, pull the fastening strap back to its original position. The heel/fetlock guard is now securely mounted in the heel section.

6

To put on the Swiss Galoppers with a fetlock guard, fold the fetlock guard slightly backward for easier entry. For horses with long feathering, arrange the hair so that it lies properly. Then close the upper Velcro and press it firmly.

IMPORTANT NOTES

Do not use hoof grease or similar greasy products such as oils or creams! These reduce the boot's optimal grip!

To extend the lifespan of your Swiss Galoppers, regularly clean the fastening and fetlock straps by rinsing with water and always close the Velcro fasteners when not in use.
